For over 25 years Poul's Landscaping has been growing trees and shrubs in our own Lake County nurseries so that we could provide a consistent supply of quality plants to our Landscape Design/Construction clients. Just twice a year these same specimen plants are made available direct to the general public during our Annual Spring and Fall Tree Sales.

WHY IT'S IMPORTANT TO BUY LOCALLY GROWN TREES

A tree or shrub that is grown in our particular soils and temperature fluctuations has superior adaptability, which means the plant will more than survive, it will thrive; providing:

- better flowering performance and foliage color
- better growth habit, less die-back
- improved disease and pest resistance
- reduced need for fertilizers and pesticides
- reduced transportation costs
- reduced use of fossil fuels for shipping
- reduced pollution
- safeguards local employment

When you buy trees where they are grown you get the benefit of talking directly with our expert field staff of certified horticulturists and arborists who can give you the guidance you can't get at the big box stores – you'll be able to ask questions about where, when, and how to plant the tree and get knowledgeable answers.

GET EXPERT LANDSCAPE ADVICE AT OUR OPEN HOUSE

Whether you want to plant a tree, install a new patio, or have a gardening question, our staff of Horticulturists, Arborists and Landscape Designers will be able to help you with just the right solution.
